## Professional Summary

Innovative AI Engineer with over six months of freelancing experience. Developed cutting-edge machine learning models during my tenure as an intern at Comportement Software Private Limited (June-August). Specialization in artificial intelligence solutions such as Eva\_AI\_Job\_Butler, Machine Learning Projects and Deep-Learning initiatives which demonstrate a strong grasp on deep neural networks.

## Key Skills

- Artificial Intelligence: Expert knowledge of AI systems including RAG models.
- Statistical Analysis: Proficient with data preprocessing techniques for machine learning applications.
- Problem Solving: Demonstrated ability to design innovative solutions in the fields of Machine Learning and Deep-Learning algorithms, showcasing excellent problem-solving abilities using Python.

## Education

Master of Science (M.Sc.) in Artificial Intelligence & Machine Learning

**Christ University, Bengaluru**

Jun 2023 – May 2025

Bachelor of Science (B.Sc.) in Computer Science, Mathematics, Electronics

**Christ University, Bengaluru**

Jun 2020 – Jun 2023

## Experience

Freelancer (June 2025 - September 2025)

- Developed Eva\_AI\_Job\_Butler as a personal intelligent assistant leveraging Retrieval-Augmented Generation system.
- Created machine learning models with comprehensive understanding gained from working on Machine Learning Projects repository and Deep-Learning algorithms, demonstrating an advanced skillset in both fields.

Intern at Comportement Software Private Limited (June 2025 - August 2025)

- Worked under senior engineers to develop applications incorporating AI-based solutions for conversational interfaces.
- Engaged actively with code reviews contributing significantly towards the successful implementation of innovative projects.

## Key Projects

1. **Eva\_AI\_Job\_Butler:**

Developed an intelligent assistant that automates and streamlines job search processes by implementing a Retrieval-Augmented Generation system, showcasing advanced knowledge in AI systems.

2. **Machine Learning Projects Repository:**

Created numerous machine learning models through hands-on experimentation with different algorithms learned from extensive analysis of data files stored as .ipynb documents using Python libraries such as NumPy and pandas for preprocessing tasks prior to model training.

3. **Deep-Learning:**

Conducted comparative studies on various deep-learning frameworks, demonstrating a keen interest in exploring the best-fitting algorithm based upon specific use-cases.
